

CASE STUDY

Hydraulic Fracturing Support Services

A Viable Solution for our customer in
Casper, Wyoming

Project Highlights

The project lasted over 1.5 years, during which Crown Employees worked 154,985 man hours supporting our customer. Crown provided 24 employees daily to assist with Hydraulic Fracturing duties such as CDL drivers for equipment mobilization, Rig up/Rig down labor, fluid end maintenance, and equipment operations during frac stages.

Advantages:

- Casper's unemployment rate was 3.9% in July 2013, and the utilization of Crown Supply Company contributed to our client's success in obtaining their current market share
- Crown Supply Company provides full administration, management, scheduling, in house safety training, and internally handles any employee issues for all of their crews which resulted in minimal disruption to our customer.
- Our client could focus their energy on running frac operations and not on hiring and training employees
- Crown employees performed routine and preventative maintenance on fluid ends between frac stages, which resulted in less down time during fracturing operations
- Crown employees simultaneously assisted three frac crews based out of Casper, WY working on locations ranging from Craig, CO to Williston, ND

Project Scope:

Hydraulic Fracturing Support including both DOT and non-DOT employees

Location:

Casper, Wyoming, U.S.A.
